**MH003M (Clearview Demister 17C)**

## Diver's Helmet Port Demisting Device

The Diver's Clearview Demister is a simple, time-proven device that provides a hands-free method of keeping diving helmet and mask face ports free from condensation during working dives.

The Clearview unit consists of a clear Perspex lens fitted externally to the port retainer, creating a double-glazing effect to reduce condensation. It is secured to the helmet or mask using two screws fitted into the welding lens or accessory holes.

A 90° elbow connects to a clear PVC tube, which routes hot water from the diver's suit to assist in maintaining a clear viewing area.

## Technical Specification

Models	MH003 (Clearview Demister Standard), MH003M (Clearview Demister 17C)
Tubing	Clear PVC tubing
Connector	5 mm hose connector
Elbow	90° swivel elbow
Supply	Supplied with 1 m of tubing to connect to suit

**Applications: Commercial diving, Inland diving, Saturation diving, Search and rescue**
