Industry standard rubber moulded connectors for subsea systems

Marsh Marine connectors are well-proven rubber moulded (RM) connectors used across the subsea industry for underwater cameras, lighting, and a wide range of instrumentation.

Manufactured from specialised neoprene moulding, these connectors are compatible with commonly used 'Marsh Marine' style interfaces. They are available in 2, 3, and 4 pin configurations, with both male and female options.

Application of a simple silicone lubricant will help maintain connector condition and assist with make and break during operation.

Technical Specification

Model	CO-12F / CO-12M, CO-13F / CO-13M, CO-14F / CO-14M
Material	Special neoprene moulded
Configuration	2, 3 and 4 pin, male and female
Compatibility	Compatible with Marsh Marine style connectors

Applications: Underwater cameras, Subsea lighting, Instrumentation systems, Diving operations, ROV systems
