

Divers Clearview

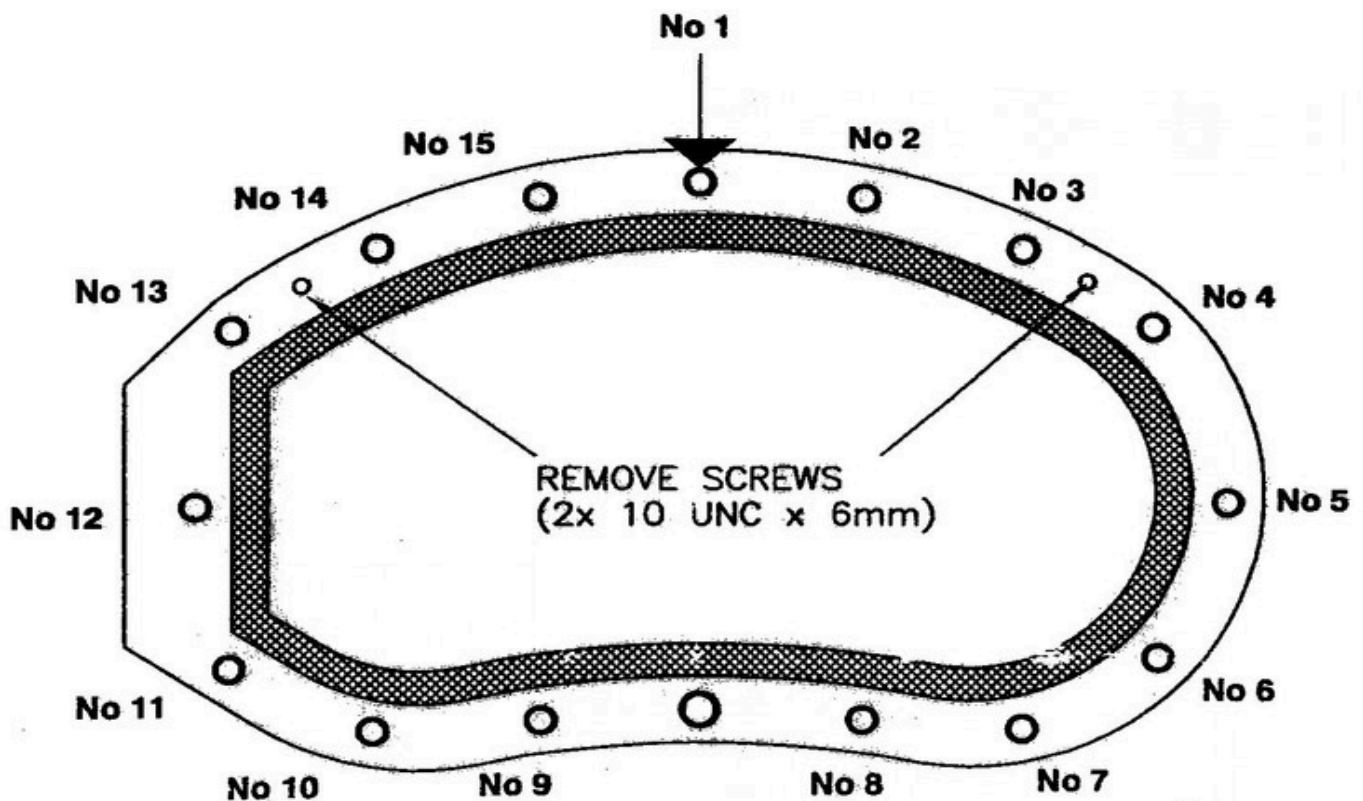

The Divers Clearview is a simple, time-proven device providing a hands-free method of keeping the face ports of diving helmets and masks free of condensation during hard working dives.

To Fit the Divers Clearview

1. Remove protective film from the Clearview device
2. Attach the Clearview device using the 2 accessory screws as show in the illustration below
3. Trim PVC hose to appropriate length
4. Connect PVC hose to outlet from the hot water suit neck using the supplied hose connector

No drain holes are deemed necessary in the Clearview device as it is an 'imperfect' fit on the mask/helmet offering adequate drainage for the hot water.

266 Auchmill Road, Buckburn, Aberdeen, United Kingdom
