Helmet Communications Penetrator

C-TECNICS
SUBSEA ELECTRONICS

Order Code: **MH-004 (KM37 / KM97)**
MH-005 (17C)
MH-006 (Gland-insert)

Robust replacement penetrators for offshore diving helmets

Developed for demanding saturation and air diving environments, the C-Tecnics Helmet Communications Penetrator strengthens the cable interface at the helmet communications port.

Its low-profile stainless steel body and cable positioning help keep the communications cable close to the helmet, reducing the risk of snagging.

Three versions are available to suit different helmet arrangements. Each is supplied with a 4-pin RMG connector, with other connector options available upon request.

Technical Specification

Product type	Helmet communications penetrator
Body material	Stainless steel
Profile	Low-profile design
Connector	4-pin RMG
Connector options	Others available on request
MH-004 fit	KM37 / KM97 helmets
MH-005 fit	17C helmets
MH-006 fit	Gland-insert version

Applications: Commercial diving, Surface-supplied diving
